COMBINING ADVANCED DIGITAL TECHNIQUES WITH TRADITIONAL PHOTOGRAPHY

Professional Photographic Services is a quality-custom oriented photo printing and digital graphics service. We have been in business for thirty-one years and have a wide variety and depth of photographic, graphic, artistic and computer experience. This experience, technical skill and artistic vision has enabled the people at PPS to remain at the forefront of photo lab and digital photographic techniques to offer a wide range of services, with the finest quality possible, all within the necessary time and budget constraints.

Digital Photography - Digital has pushed film to the fringes of photography. Staying at the forefront has caused PPS to adopt an increasingly digital workflow. We are now scanning film to digital files for printing. We create, combine, modify, retouch and restore images using computer monitors along with Photoshop, Illustrator, In-Design and other programs. Then we can print on a variety of inkjet media, some of which compares to traditional luster and glossy photo paper, Duratrans backlit transparencies and Duraflex polyester prints. Other media, fine art paper, canvas and other fabrics, have expanded the choices for printing photographs.

Scanning - PPS can scan your photographic film or flat reflective originals. The resulting files can be relatively small for use on the Internet or for making prints as small as locket size or they can be hundreds of megabytes in size to allow making large prints or back-lit transparencies for advertising or trade show display. The scans can be used by PPS as the beginning of the production process or written to a disk and delivered to the customer for use in computer graphics work.

Digital File Preparation - PPS can restore old, faded or damaged photographs and alter or remove unsatisfactory details from images. We can design files to print greeting cards, comp cards, postcards, posters and many other printed pieces. We can create large display graphics for trade shows, reception areas, retail store and lobbies and print them as needed. We can create Powerpoint presentations, transfer 8mm film and video tape to DVD. We can design web pages and upload them to your website. The variety and quality of graphic tasks that can be performed with computer software is unsurpassed.

Digital Printing - After the file is prepared, PPS can print it as small as a locket to as large as required in panels. We can print sales literature, mailers, greeting cards and other pieces in smaller quantities. If needed, the printing can be trimmed, folded, bound, mounted or laminated. PPS can print photographic quality digital images up to 44" wide. These printers produce prints that equal or surpass the quality of traditional photographic prints, while offering advantages not possible on photo paper, such as the choice of paper and paper surface, canvas or fabric. This is particularly advantageous in the reproduction of artwork. PPS can print even larger display graphics for trade shows, reception areas, retail stores and lobbies in panels up to 44" wide.

Photographic Film Processing - From the beginning PPS has sought to offer the widest range of custom photo lab services possible to customers using photography in their daily activities. PPS processes color negative, color slide, color transparency and black and white negative film in sizes up to 8"x10". Our processing schedule is designed to meet your service needs, and our quality control procedures include regular processing of test strips and measurement of critical processing parameters to assure you of the superior results necessary in film processing.

Photographic Film Printing - PPS can print your black & white negatives, color negatives or color transparencies. We will scan the film and print finished prints on our photo inkjet printers. This allows us to offer traditional luster and glossy paper, white film which is similar to Duraflex and backlit film which is similar to Duratrans. We can also print on various art papers, canvas and other fabrics.

Print Finishing

Mounting - Mounting can be done on virtually any flat, smooth substrate, the most common being reflective prints onto cardboard, foamcore, gatorfoam and sintra or display transparencies onto plexiglass. Boards up to 60"x120" and 1" thick can be handled.

Laminating - Mounted prints up to 60"x120" can be laminated and unmounted prints up to 50" wide can be laminated on both sides either with general purpose laminate or with heavier two sided laminate designed for greater durability.

Framing - PPS offers a wide variety of custom framing for most any purpose.

Digital Photography & Graphics

PPS can assist you with the entire production process or with just a part

Creation: photo displays
photo retouching and restoration
photo composites
posters
signs
banners
web sites
on-screen presentations: floppy or CD-Rom

Scanning: film or flat reflective originals

Printing: ink jet prints:
photographic quality up to 44x90 on photo based paper, art paper, canvas,
poplin fabric, oxford fabric, tyvek, vinyl and translucent film

Tips and suggestions to ensure successful production:

For photographic images the best file format is RGB Tiff; JPG is acceptable, however some loss of quality may be experienced depending upon the amount of file compression. RGB is better than CMYK for photo output because the RGB color space is larger and the current 7, 8 or 12 color ink jet printers can print a lot of those extra colors. In addition, the driver software for these printers is optimized for RGB files. This will result in richer color and smoother color gradients.

For graphics, if you are using one of the most common graphics programs, i.e. Illustrator, Indesign, Quark, etc., supply your original, native file. Check with PPS for other programs. In any case, also supply any dropped in graphics and both screen and printer fonts.

Size your file appropriately for the output intended; the correct proportion and sufficient dpi.

Always supply a proof with your file. The proof should preferably be in color and have desired spot colors noted on it (i.e. PMS #'s). If you do not supply a proof we can't necessarily tell whether your file is printing as you intended. If we are only providing output service then we are not responsible for the file creation. In the absence of an obvious flaw in the output and if you did not supply a proof we will expect payment for our service.

Allow enough time to process your job. Rush jobs seem to be inevitable, however they allow no time for problems to be solved and can sometimes get to be overwhelming. Call to check lab conditions and schedule if you require ASAP turnaround.

Prices effective 2-1-06, subject to change without notice.

Scanning

Photographic film is scanned on dedicated film scanners, smaller flat reflective is scanned on high quality flat bed scanners and larger flat reflective is either scanned in sections and stitched together or copied onto large format photographic film and then scanned. Our skilled scanning technicians using our high quality scanning equipment are capable of producing excellent quality scans at an affordable price. Production scans include color and density correction and dust removal as part of the normal service. The cost of the scan is based upon what is scanned, how large it is and how large a file is created. Film originals other than 35mm, 645, 6x6 cm, 6x7 cm and 4x5 or large flat reflective will require additional charges.

Normal delivery is 2-3 working days. Rush service is available as lab conditions permit at additional charge.

Digital Photographic Prints

Your Digital Photographs can be printed on our Photo Quality Ink Jet Printers from your Digital Camera Files or your Scans. The quality of these prints can equal or surpass silver halide photographic paper.

It is our normal practice to adjust the printing characteristics of the file to give a print with quality density, contrast and color. If you wish to have your print match a particular appearance, please provide samples for that purpose, however keep in mind that these are not custom prints with accurate color matching. For that service please order our custom prints.

The color output of these printers is calibrated and we suggest that you provide us with RGB Tif for best results. JPG files are also acceptable however JPG compression can reduce the quality of the resulting print. These are the only file formats printable with this service

Prints can be printed on glossy or luster photo ink jet paper.

DIGITAL PROOFS (602)

Proofs will normally be printed with a smaller dimension of 4" and a larger dimension between 5" and 6" depending upon the dimensions of your digital file.

Normal delivery is three to four working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is brought in, so that delivery can be discussed and problems avoided.

<u>Number of Prints Per File</u>		
4" Proofs	ONE	2-4
All files on disk	\$ 0.65	0.52
Selected files on disk	0.91	0.73

DIGITAL CANDID PRINTS (112)

DIGITAL CANDID PRINTS are a series of digital images of a wedding or similar event. The order must consist of RGB JPG or TIF files on a disk or uploaded via the internet. Also include a printing script either as a file on the disk or a printed list showing file name, print quantity and print size.

The normal delivery on candid prints is ten working days plus four working days for each additional print size. If you have a specific delivery requirement we will try to meet it, however rush service is not available on candid.

Size	<u>QUANTITY PER PRINT SIZE</u>

Prepared Digital Photographic Prints

PREPARED DIGITAL PHOTO PRINTS are uncorrected photographic prints printed from your prepared digital files. These prints are perfect for those photographers who prefer to size, crop, color correct and retouch their own files. Luster, glossy or flat matte paper are available..

File Specs: uncompressed RGB tif or JPG (level 10 or higher) saved with .tif or .jpg extension
 150-300 dpi
 RGB (not CMYK)
 flattened with no masks or channels
 cropped and sized to the final print size; different print sizes require different files;
 if you wish a border you must make it part of your file
 color and density corrected
 saved on disk (CD or DVD) or you may e-mail or ftp to us (call or e-mail to set up ftp)
 quantity pricing is based on prints per individual file on the same paper
 PPS will not alter the file in any way

Normal delivery is two to three working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is placed, so that delivery can be discussed and

Deluxe Digital Canvas Prints

DELUXE DIGITAL CANVAS PHOTO PRINTS are to give photographs an artistic appearance by printing them on canvas. The skilled printers at PPS will size, crop and color correct as needed. When color correcting we will adjust for a pleasing color and density applied to the entire image. Retouching is available at additional charge, please request a quotation. These canvas prints will be coated with PremierArt Eco Print Shield which is generally regarded as the best coating for canvas prints since it will not crack, yellow or become brittle. The coating protects prints from moisture, light humidity atmospheric contaminants, abrasions and fingerprints. These canvas prints will be delivered unmounted and unstretched.

File Specs: uncompressed RGB tif or JPG level 10 or higher
 150 dpi or higher
 flattened with no masks or channels
 saved on disk (CD or DVD) or you may e-mail or ftp to us (call or e-mail to set up ftp)
 quantity pricing is based on prints per individual file on the same canvas

Normal delivery is three to five working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is placed, so that delivery can be discussed and problems avoided.

Deluxe Digital Canvas Prints - Standard Stretch

DELUXE DIGITAL CANVAS PHOTO PRINTS - STANDARD STRETCH are to give photographs an artistic appearance by printing them on canvas with standard stretching (not gallery wrap) on a 3/4" stretcher frame. The skilled printers at PPS will size, crop and color correct as needed. When color correcting we will adjust for a pleasing color and density applied to the entire image. Retouching is available at additional charge, please request a quotation. These canvas prints will be coated with PremierArt Eco Print Shield which is generally regarded as the best coating for canvas prints since it will not crack, yellow or become brittle. The coating protects prints from moisture, light humidity atmospheric contaminants, abrasions and fingerprints.

File Specs: uncompressed RGB tif or JPG level 10 or higher
 150 dpi or higher
 flattened with no masks or channels
 saved on disk (CD or DVD) or you may e-mail or ftp to us (call or e-mail to set up ftp)
 quantity pricing is based on prints per individual file on the same canvas

Normal delivery is three to five working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is placed, so that delivery can be discussed and problems avoided.

Custom Digital Fine Art Prints

CUSTOM DIGITAL FINE ART PRINTS are for those photographers and artists who want the finest print that PPS can produce from their digital files on fine art paper. The skilled printers at PPS will size, crop and tone the file as needed. When toning we will adjust for a pleasing color and density applied to the entire image and then apply local dodging, burning and masking to enhance any print areas that require special adjustment. If the print is an art reproduction we will try to match the original art as closely as possible. Retouching is available, however it is at additional charge, please request a quotation. Smooth or textured art paper is used for these prints.

File Specs: uncompressed RGB tif or JPG level 10 or higher
150 dpi or higher
flattened with no masks or channels
saved on disk (CD or DVD) or you may e-mail or ftp to us (call or e-mail to set up ftp)
quantity pricing is based on prints per individual file on the same paper

Normal delivery is three to five working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is placed, so that delivery can be discussed and problems avoided.

Custom Digital Canvas Prints

Photographs, copy prints, retouched photos, photo restorations, art reproductions and digital photography can be printed on our Photo Quality Ink Jet Printers from your computer files on canvas. Printing on this canvas can enhance the artistic effect of the print.

The pricing on this page applies to a properly prepared RGB tif file. If you do not have an RGB tif file we can prepare it for you, however there may be additional charges for scanning, file conversion or file preparation.

The purpose of these prints is to allow for the artistic presentation of an image without getting involved in the details of Giclee printing. In this category of printing it is possible to print a wider variety of types of images. The color and density of the print will be adjusted by our skilled printing staff without going through the proofing process the is used with Giclee printing. The color output of these printers is calibrated, however as usual not all colors can be matched. It is advisable to supply us with color samples with the order to get the closest color match possible. The canvas used is acid free and the inks are Epson archival pigmented inks so the prints will exhibit superior longevity.

Normal delivery is four to five working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is brought in, so that delivery can be discussed and problems avoided.

Custom Digital Canvas Prints - Standard Stretch

DELUXE DIGITAL CANVAS PHOTO PRINTS - STANDARD STRETCH are to give photographs an artistic appearance by printing them on canvas with standard stretching (not gallery wrap) on a 3/4" stretcher frame. The skilled printers at PPS will size, crop and color correct as needed. When color correcting we will adjust for a pleasing color and density applied to the entire image. Retouching is available at additional charge, please request a quotation. These canvas prints will be coated with PremierArt Eco Print Shield which is generally regarded as the best coating for canvas prints since it will not crack, yellow or become brittle. The coating protects prints from moisture, light humidity atmospheric contaminants, abrasions and fingerprints.

File Specs: uncompressed RGB tif or JPG level 10 or higher
 150 dpi or higher
 flattened with no masks or channels
 saved on disk (CD or DVD) or you may e-mail or ftp to us (call or e-mail to set up ftp)
 quantity pricing is based on prints per individual file on the same canvas

Normal delivery is three to five working days depending upon lab conditions. If you have a specific delivery requirement, please inform PPS when the order is placed, so that delivery can be discussed and problems avoided.

Deluxe Backlit Display Prints

Deluxe Backlit Display Prints can be printed from your prepared digital RGB tif files. The files should be color, density and contrast corrected, dodged and burned, cropped, sized and properly formatted. These prints will be printed using our HP Z3200 Ink Jet Printers on translucent film with the appropriate printer profile.

The files that you provide us must be prepared as follows to fall into this printing category:

1. tif file
2. saved with appropriate .tif extension
3. RGB (not CMYK)
4. flattened
5. no masks or extra channels
6. between 150 and 300 dpi (higher may provide better detail depending upon the image)
7. cropped and sized as you want them to print
8. saved on disk (CD, DVD, Zip 100/250) or you may ftp or e-mail to us

The color output of the printer is calibrated, however color matching will only be approximate with these ink jet transparencies. It is advisable to supply us with color samples with the order to get the closest color match possible.

If you do not have your graphic prepared as a digital file we can prepare it for you, however there will be additional charges for file preparation.

Delivery is usually 3 working days depending upon the quantity of prints and other lab conditions. If you have a specific delivery need, please inform PPS when the order is brought in, so that we can schedule delivery and avoid problems.

Giclee Setup

Giclee printing is the high quality reproduction of art works using ink jet printers. The recent advances in ink jet printing technology have allowed for major advantages in this method of art reproduction compared to more traditional printing presses. These advantages include higher quality because these printers use more ink colors, print at higher resolution and use some form of stochastic screening which allows better reproduction of photographic like images. In addition the prints are made directly from digital files so the initial set up costs are lower and the printers are less costly than presses and print much slower so the concept of a run of one print is feasible.

Giclee Setup includes

1. Minor clean up of digital image and correction of color and density to match your original art as closely as possible. If clean up is excessive we will provide a quotation prior to proceeding.
2. Production of an approximately half sized proof for your approval. Additional proofs with color and density correction are available at \$35.00 each.
3. Archiving the image for future use.
4. One finished print, sized accordingly, including any white space around image.

Normal delivery time for setup is 5-7 working days to produce proofs. After approval of the proof production of the first print will normally take 3-4 working days.

Giclee Setup Costs (606PREP)

Giclee Size* Fine Art Paper

8x10	39.74

Giclee Printing

The final step is printing. Our Giclee prints can be considered new works of art. They are printed on fine quality papers of your choice using Epson photo ink jet printers and Epson's pigmented ink. This ink is less susceptible to fading than dye inks, while achieving a wide color gamut. Depending upon the paper permanence over 100 years can be expected.

One of the advantages of Giclee printing is the short run nature of ink jet printing. With Giclee it is possible to order only the prints that are needed. After the print run the file will be archived for future printing.

In addition the print quantity is cumulative. The first print is included in the setup. Then if you place an order for 1-22"x28" prints on art paper the cost would be \$79.66 per print. If you later place an order for 4-22"x28" prints of the same image on the same paper, the price for those prints would be the 5-9 quantity price or \$58.95 per print.

Ganging of images onto larger sheets is possible at no additional charge. When laying out ganged images please allow for any border you would like around each image.

Normal delivery time for printing is 7-10 working days.

Retouching and Restoration

Retouch & Restoration (460FCRRET)

	<u>Price</u>
Minor Repair	\$ 40.00- 79.00
small number of minor spots and cracks in background	
not much detail to recreate	
Medium Repair	\$ 80.00- 119.00
tonal value correction	
spots and cracks on face and clothing, but not distorting features or detail	
replacing small portion of simple background	
Major Repair	\$ 120.00 and up
tonal value correction on face or clothing	
bad spots and cracks on face and clothing	
replacing more detailed portions of background	
Extensive Repair	Quote
very poor print	
replacing portion of face, hands, clothing, detailed background, etc.	

Restoration prices are based upon one subject, add 25% for each additional person.

Prices effective 2-1-02, subject to change without notice.

Film Processing

TYPE OF PROCESSING

PPS operates two hanger transfer machines; one for developing color negative film in C-41 chemistry and one for developing Ektachrome and compatible color slide film in E-6 chemistry. PPS operates in strict conformance to Kodak specifications and regularly runs standard control strips as well as being a member of Kodak's Q-Lab Program for E-6 processing.

Black & white film is processed in a 3-1/2 gallon sink line using reels and hangers with D-76 developer. Use of a different developer is possible by special arrangement at additional cost.

COMPENSATED DEVELOPMENT

Adjusting the development time of color negative film to compensate for exposure variations is not recommended, however if some loss of quality is acceptable this adjustment can be performed. Adjustment of development time for E-6 and B&W film is a regular procedure, however some loss of quality may result.

DELIVERY TIME

Normal delivery time on C-41 and B&W processing is one day. E-6 is processed twice daily with normal delivery being "in by 10:00 a.m. - out by 2:00 and in by 3:00 p.m. - out next morning." Processing at other than scheduled times will incur a setup fee of \$40.00 plus the normal cost of the film processing. Note that late afternoon film processing volume is limited by time and film machine volume, so it is best to bring your film early. For processing outside the normal business hours of the lab there will be a fee of \$200.00 to open the lab plus the normal charge for any film processed. All special delivery requirements must be previously arranged and are dependent upon lab conditions.

Proofs

Proofs are available from full rolls of film only at the time of processing. All proofs are printed borderless, E or F surface and the largest proportional negative area is printed.

Color proofs are carefully printed with electronic negative analysis, however some color and density variations may occur depending on subject matter and exposure of the negatives.

Black & White proofs are carefully printed with density control and average contrast, however density and contrast variations may occur depending on subject matter and exposure of the negatives.

Proofs are intended to give an indication of the printing characteristics and subject matter of the negatives. They are not intended to be used as saleable prints or for reproduction.

Proof sheets are printed from the entire roll of film (if possible) at one time and therefore will receive an average exposure. If the negatives have consistent density and color balance this will work fine, however if there are variations in density or color balance the proof sheet will show this variation.

Normal delivery time for E surface, normal size color proofs is 3-5 working days. Longer delivery times can be expected for enlarged proofs and color proofs on F surface paper. Normal delivery time for contact sheets is two working days. Rush service is available on the paper surface in production at the time of the request depending upon lab conditions.

Reproofs

Reproofs are available under the same circumstances as proofs at a time after the film is processed. Reproofing is available only from the negative sizes listed. These negative sizes include the currently popular professional negative sizes. If a proof sheet is ordered under this category wide variations in color and density may result if emulsion numbers or film types are mixed. Normal delivery time for reproofs is 4-5 working days. Rush service is available depending upon lab conditions.

Prints From Film

These prints are printed from 110 to 8x10 color negatives, black & white negatives or color transparencies. The film is scanned to a digital file and then printed on a pigmented inkjet printer. If you require a particular color balance please provide a color samples and we will use them as a guide for color and density, however usually it is only possible to approximate the colors and densities in the original. It will not be considered a printing defect if PPS does not have your color sample during printing and the print does not match your sample.

Please provide cropping instructions which we will follow as closely as possible.

You may specify normal border, borderless or any other border specifications you require.

Normal delivery is approximately four to five working days. If you have a specific delivery requirement, please inform PPS at the time the order is brought in, so that delivery times can be discussed and problems avoided.

Transparencies and Negatives

Transparencies are produced from slides, transparencies and flat reflective originals. These transparencies will be a reasonably close match to the original, but it is often not possible to match all colors and to match the contrast range of the original.

Copy negatives are produced from flat reflective original.

Transparencies and negatives are produced using a variety of special films suitable for the purpose.

Normal delivery is approximately three to four working days. Rush service is available as lab conditions permit at additional charge.

35mm Duplicate Color Slides

SLIDE DUPLICATES are full frame color copies of 35mm color slides prepared on Kodak slide duplicating film. Some loss of image around the edges of the original is unavoidable due to variations in slide mounts and production requirements. If this is a problem, originals should be remounted in duplication mounts to minimize the loss of image. Slide duplicates are normally mounted in regular plastic mounts. Color balance and density will approximate that of the original but will not be an exact match.

If the best quality slides are required, CUSTOM SLIDE DUPLICATES should be ordered. Extra care is taken so that these slides color and density match the original as closely as possible within the limitations of the ability of film to match the original.

Normal delivery is approximately four to five working days. Rush service is available as lab conditions permit at additional charge.

Mounting on Foamcore

Foamcore (500FC)

Foamcore is an inner layer of polystyrene foam covered by white claycoated paper on both sides. It is a strong, lightweight, excellent mounting board, but fragile and likely to bow unless supported. It is recommended that prints mounted on foamcore either be for short term, careful use or protected by framing of some sort.

Mounting

Mountboard, Foamcore & Gatorfoam (500)

After the prints are made they can be mounted on a variety of materials to protect and display them.

SW BOARD - cardboard product slightly less than 1/16" thick.

DW BOARD - cardboard product approximately 3/32" thick.

FOAMCORE - foam covered by paper on both sides, light weight, excellent mounting board, but fragile, likely to bow unless supported.

GATORFOAM - foam covered by paper on both sides but tougher and more durable than foamcore, light weight, excellent mounting board, much more likely to remain flat & rigid.

Mounting & Other Finishing

Sintra

After the prints are made they can be mounted on a variety of materials to protect and display them. For customer supplied prints, see appropriate size and mount material and add 50%.

SINTRA - moderately expanded PVC sheet, lighter than plexiglass and more durable than foamboards, excellent mounting board, thinner sheets flexible and able to be bent into curve, heavier sheets much more rigid.

Laminating

Laminating the front of a mounted print puts a protective film over the surface of an already mounted print. This provides protection from dust, dirt and moisture and allows the print to be cleaned with relatively little risk of damage to the image. It also provides protection from the UV light and atmospheric gases that are the primary cause of print fading.

Encapsulation of the print by 5 mil glossy laminate provides an inexpensive means of protection. If the print is large enough it can be rolled for storage or shipping.

The clear textured laminate on the front provides the greatest protection for rollable graphics and photographs. This is especially suitable for rollable trade show graphics that have to endure repeated rolling and unrolling as the textured surface hides the scuffs and scratches that a smooth laminate especially glossy would show.

Please add 50% to these prices for customer supplied graphics.
